Also Innovators Mar 16 2021 'Thank you for your order, Mr Mainframe Customer. The cost is £5 million and the lead-time for manufacture will be two years. In the meantime you will have to build a special computer centre to our specification. For our part, our project team will help you recruit and train potential programmers and we shall advise on how you might use the system.' How different from today when the customer will want to see a specific application running before he puts a hand in his/her pocket. Chris Yardley lived the changes as a computer salesman and tells his story of a career living and working in five countries. Warts and all. The ecstasies, the heartbreaks and idiocies of major corporations. His career was not a planned one. In a growing industry, opportunities presented themselves and Chris believes he grasped every one presented. Having written his story, he has had every chapter verified by at least one person who features in that narrative. His respondents have universally endorsed the facts with comments such as 'Wow, I'd forgotten most of that'. 'You have a fantastic memory.' 'I never knew before the full facts of what happened.' 'How have you remembered all the circumstances?' 'It really is a people business.'

This is the only book that has followed a computer sales career over almost 50 years.

Indigenous Efflorescence May 06 2020

Indigenous efflorescence refers to the surprising economic prosperity, demographic increase and cultural renaissance currently found amongst many Indigenous communities around the world. This book moves beyond a more familiar focus on 'revitalisation' to situate these developments within their broader political and economic contexts. The materials in this volume also examine the everyday practices and subjectivities of Indigenous efflorescence and how these exist in tension with ongoing colonisation of Indigenous lands, and the destabilising impacts of global

neoliberal capitalism. Contributions to this volume include both research articles and shorter case studies, and are drawn from amongst the Ainu and Sami (Saami/Sámi) peoples (in Ainu Mosir in northern Japan, and Sapmi in northern Europe, respectively). This volume will be of use to scholars working on contemporary Indigenous issues, as well as to Indigenous peoples engaged in linguistic and cultural revitalisation, and other aspects of Indigenous efflorescence.

Competing for Influence Nov 23 2021 Amidst growing dissatisfaction with the state of government performance and an erosion of trust in our political class, *Competing for Influence* asks: what sort of public service do we want in Australia? Drawing on his experience in both the public and private sectors - and citing academic research across the fields of public sector management, industrial organisation, and corporate strategy - Barry Ferguson argues the case for the careful selection and application of private sector management concepts to the public service, both for their ability to strengthen the public service and inform public policy. These include competitive advantage, competitive positioning, horizontal strategy and organisational design, and innovation as an all-encompassing organisational adjustment

mechanism to a changeable environment. But these are not presented as a silver bullet, and Ferguson addresses other approaches to reform, including the need to rebuild the Public Sector Act, the need to reconsider the interface between political and administrative arms of government (and determine what is in the 'public interest'), and the need for greater independence for the public service within a clarified role. This approach, and its implications for public sector reform, is contrasted with the straitjacket of path dependency that presently constricts the field.

Power Jun 06 2020 In 2018, the People's Republic of China (PRC) was, by most measures, more powerful than at any other time in its history and had become one of the most powerful countries in the world. Its economy faced serious challenges, including from the ongoing 'trade war' with the US, but still ranked as the world's second largest. Its Belt and Road Initiative, meanwhile, continued to carve paths of influence and economic integration across several continents. A deft combination of policy, investment, and entrepreneurship has also turned the PRC into a global 'techno-power'. It aims, with a good chance of success, at becoming a global science and technology leader by 2049 - one hundred years from the founding of the PRC. In surveying the various ways in which the Party-state wields its hard, soft, and sharp power, the China Story Yearbook: Power offers readers a sense of the diversity of power at work both in

China and abroad. Citizens of the PRC have long negotiated the state's influence; increasingly, diaspora communities and other actors are now being subject to its might. As with previous editions in the series, we place important developments in historical context, and adopt a cross-disciplinary approach: it is our view that economy and politics cannot be divorced from culture, history, and society. The Yearbook provides accessible analysis of the main events and trends of the year and is an essential tool for understanding China's growing power and influence around the world.

R for Data Science Jul 20 2021 Learn how to use R to turn raw data into insight, knowledge, and understanding. This book introduces you to R, RStudio, and the tidyverse, a collection of R packages designed to work together to make data science fast, fluent, and fun. Suitable for readers with no previous programming experience, R for Data Science is designed to get you doing data science as quickly as possible. Authors Hadley Wickham and Garrett Grolemund guide you through the steps of

importing, wrangling, exploring, and modeling your data and communicating the results. You'll get a complete, big-picture understanding of the data science cycle, along with basic tools you need to manage the details. Each section of the book is paired with exercises to help you practice what you've learned along the way. You'll learn how to: Wrangle—transform your datasets into a form convenient for analysis Program—learn powerful R tools for solving data problems with greater clarity and ease Explore—examine your data, generate hypotheses, and quickly test them Model—provide a low-dimensional summary that captures true "signals" in your dataset Communicate—learn R Markdown for integrating prose, code, and results

Road Pricing and Provision Dec 13 2020 Road pricing is not a new concept—toll roads have existed in Australia since Governor Macquarie established one from Sydney to Parramatta in 1811—and distance-based charging schemes have been trialled and implemented with varying success overseas. But how would full market reform of roads look in a federation like Australia? In its responses to the 2016 Australian Infrastructure Plan and the 2015 Competition Policy Review, the Australian Government explicitly supported investigating cost-reflective road pricing as a long-term reform option, and has committed to establishing a study chaired by an eminent Australian to look into the potential impacts of road pricing reform on road users. The

challenges we face in this space are manifold and complex, and we still have a long road ahead of us. However, with advocacy for reform coming from interest groups as diverse as governments, private transport companies, peak industry bodies, policy think tanks and state motoring clubs, there is now more support than ever before for changing the way we provide for and fund our roads. This book

seeks to advance the road reform agenda by presenting some of the latest thinking on road pricing and provision from a variety of disciplinary approaches—researchers, economists and public sector leaders. It stresses the need for reform to ensure Australians can enjoy the benefits of efficient and sustainable transport infrastructure as our

population and major metropolitan cities continue to grow. Traffic congestion is avoidable, but we must act soon. The works presented here all point to the need for change—the expertise and the technology are available, and the various reform options have been mapped out in some detail. It is time for the policy debate to shift to how, rather than if, road reform should progress.
