The Humanitarian Emergency Settings Perceived Needs Scale (HESPER) Jul 07 2020 The Humanitarian Emergency Settings Perceived Needs Scale (HESPER) provides a quick, scientifically robust way of assessing the perceived serious needs of people affected by large-scale humanitarian emergencies, such as war, conflict or major natural disaster. Perceived needs are needs which are felt or expressed by people themselves and are problem areas with which they would like help. The HESPER Scale assesses a wide range of social, psychological and physical problem areas. However, it does not provide an answer as to whether, or how to, offer help. It simply identifies those serious problems that are common in a population. These problems should then be assessed and addressed in more detail. The HESPER Scale was developed by the World Health Organization and King's College London in order to fill several gaps in the humanitarian field. It enables needs assessments to be based directly on the views of people affected by humanitarian emergencies, and provides a more accurate picture of the serious problems with which the overall emergency-affected population wants help. This manual includes the HESPER Scale, as well as a detailed explanation of how to use the HESPER Scale, and how to organize, analyze and report on a HESPER survey.

Micro-hydro Design Manual Apr 27 2022 Micro-Hydro Design Manual has grown from Intermediate Technology's field experiences with micro-hydro installations and covers operation and maintenance, commissioning, electrical power, induction generators, electronic controllers, management, and energy surveys. There is an increasing need in many countries for power supplies to rural areas, partly to support industries, and partly to provide illumination at night. Government authorities are faced with the very high costs of extending electricity grids. Often micro-hydro provides an economic alternative to the grid. This is because independent micro-hydro schemes save on the cost of grid transmission lines, and because grid extension schemes often have very expensive equipment and staff costs. In contrast, micro-hydro schemes can be designed and built by local staff and smaller organizations following less strict regulations and using 'off-the-shelf' components or locally made machinery.

Digital Transformation at Scale Nov 30 2019 "This book is for people worrying about their sinking ship. Based on experience, it is a guide for navigating the blockers, buzzwords and bloody-mindedness that doom any analogue organisation trapped into thinking that while the internet has changed the world, it won't change their world. Companies that grew up on the web have changed our expectations of the services we rely on. We demand simplicity, speed and low cost. Organizations founded before the Internet aren't keeping up - despite spending millions on IT, marketing and 'innovation'. This book is a guide to building a digital institution. It explains how a growing band of reformers in businesses and governments around the world have helped their organizations pivot to this new way of working, and what lessons others can learn from their experience. It is based on the authors' experience designing and helping to deliver the UK's Government Digital Service (GDS). The GDS was a new institution made responsible for the digital transformation of government, designing public services for the Internet era. It snipped £4 billion off the government's technology bill, opened up public sector contracts to thousands of new suppliers, and delivered online services so good that citizens chose to use them over the offline alternatives, without a big marketing campaign. Other countries and companies noticed, with the GDS model now being copied around the world."

Manual for the Standard for Clinicians' Interview in Psychiatry (SCIP) Jul 27 2019 The SCIP manual will introduce a new assessment tool designed to be compatible with 21st century advances in measurement-based care (MBC) and personalized medicine in psychiatry (PMP). The SCIP includes 18 clinician-administered and 15 self-administered reliable and validated scales covering most adult symptom domains: anxiety, obsessions, compulsions, posttraumatic stress, depression, mania, delusions, hallucinations, disorganized thoughts, aggression, negative symptoms, alcohol use, drug use, attention deficit/hyperactivity, and eating disorders. Mental health professionals (psychiatrists, psychiatry residents, psychologists, therapists, clinical social workers, counselors, nurses, nurse practitioners, physician assistants, professors, students, and mental health researchers) are the primary audience of the manual. These professionals will be able to implement SCIP scales in their practice and use the SCIP psychopathology glossary as part of the emerging science of personalized medicine psychiatry (PMP). Existing books on measures and rating scales, such as the two books above, describe different scales developed by different authors at different periods. Each scale has its own rating guidelines and training requirements, which must be followed by clinicians in order to use the scales. This demands a considerable amount of time for clinicians and can be a barrier to using the scales in practice. Even within the same psychopathology domain, many published measurement scales exist. For instance, the book published by Waters and Stephane includes 120 scales for psychosis. Among the 120 scales for psychosis, which scale(s) should the clinician choose? Our proposed manual will remove these barriers by creating simple and universal principles which allow readers to use the 33 reliable and validated SCIP scales with most adult psychiatric disorders. There will be 15 videotaped interviews available online for readers who buy the book. Readers are expected to watch the interviews in conjunction with reading the manual.
