Comprehensive Healthcare Simulation: Mastery Learning in Health Professions Education Feb 27 2020 This book presents the parameters of Mastery Learning (ML), an especially stringent variety of competency-based education that guides students to acquire essential knowledge and skill, measured rigorously against a minimum passing standard (MPS). As both a scholarly resource and a teaching tool, this is a “how to” book that serves as a resource for a wide variety of health professions educators. A seminal source of information and practical

advice about ML, this book divided into five parts: Clinical Education in the Health Professions, The Mastery Learning Model, Mastery Learning in Action, Transfer of Training from Mastery Learning and The Road Ahead. Complete with high-quality images and tables, chapters take an in-depth look into ML principles and practices across the health professions. Specific educational content instructs readers on how to build and present ML curricula, evaluate short and long-run results, conduct learner debriefing and give powerful feedback, set learner achievement standards, and prepare faculty for new educational roles. An

invaluable addition to the Comprehensive Healthcare Simulation Series, Mastery Learning in Health Professions Education is written and edited by leaders in the field for practicing clinicians in a variety of health professions.

Instruction Modeling Apr 30

2020 "Blended learning" is an educational approach that combines online and face-to-face components in the classroom, and it is becoming popular in American schools. But the quality of these

programs is inconsistent; some are based on scientific findings on how children learn, while others lack such support. In fact, very little reliable information is currently

available on how to create, use, and measure the results of blended learning programs. Instruction Modeling is both a practical guide to developing and implementing blended learning programs and a first-hand account of the creation of one such program, Reasoning Mind. As Reasoning Mind cofounder and instructional designer George Khachatryan explains, instruction modeling is a leading method for designing blended learning programs: carefully study high-quality offline instruction and build online programs to recreate it on a larger scale. This book describes in practical terms how to create a blended learning program, exploring a

wide range of scientifically-supported approaches. Some programs draw on cognitive psychology, for instance, others on research in gaming, and still others on modern statistical methods such as "big data." Instruction modeling is unique amongst these approaches in that it relies above all on a deep understanding of the techniques and qualities of the world's best teachers. Making a strong case for broader use of instruction modeling, this book will be of special interest to teachers and education researchers, and an indispensable resource for those interested in the technique for its application in new contexts.

Essential Interviewing Skills for the Helping Professions Jun 01 2020 Essential Interviewing Skills for the Helping

Downloaded from singaporeeye.com on November 30, 2022 by guest

Professions reaches beyond most other essential skills for clinical interviewing books with its emphasis on social justice, attention to the role of microaggressions in clinical practice, and the utmost importance of practitioner wellness as integral to longevity in the helping professions. Each chapter addresses interviewing skills that are foundational to the helping professions from mental health to physical health, includes detailed exercises, addresses social justice, and discusses practitioner wellness opportunities. Sometimes clients' stories are fraught with trauma, other times their

stories are bound within generations of substance addiction or family violence, while other clinical stories present personal and social obstacles that arise from years of oppression at the hands of prejudice and discrimination. This book therefore goes beyond the basic ideas of choosing when to use an open question or to reflect emotions by covering how to integrate social justice and knowledge of power, privilege, and oppression into the interviewing arena. Essential interviewing skills require the practitioner to not only purposefully listen to the client's story, but also to be self-aware and willing to

acknowledge mistakes and learn from them. The work of the clinical interviewer is a continuous challenge of balancing listening, responding, action, and self-awareness, and this book is designed to help.
