World Heritage Angkor and Beyond Aug 20 2021 "Angkor, the temple and palace complex of the ancient Khmer capital in Cambodia is one of the world's most famous monuments. Hundreds of thousands of tourists from all over the globe visit Angkor Park, one of the finest UNESCO World Heritage Sites, every year. Since its UNESCO listing in 1992, the Angkor region has experienced an overwhelming mushrooming of hotels and restaurants; the infrastructure has been hardly able to cope with the rapid growth of mass tourism and its needs. This applies to the access and use of monument sites as well. The authors of this book critically describe and analyse the heritage nomination processes in Cambodia, especially in the case of Angkor and the temple of Preah Vihear on the Cambodian/Thai border. They examine the implications the UNESCO listings have had with regard to the management of Angkor Park and its inhabitants on the one hand, and to the Cambodian/Thai relationships on the other. Furthermore, they address issues of development through tourism that UNESCO has recognised as a welcome side-effect of heritage listings. They raise the question whether development through tourism deepens already existing inequalities rather than contributing to the promotion of the poor"--Publisher's description.

Benchmarking of Control Strategies for Wastewater Treatment Plants Oct 22 2021 Wastewater treatment plants are large non-linear systems subject to large perturbations in wastewater flow rate, load and composition. Nevertheless these plants have to be operated continuously, meeting stricter and stricter regulations. Many control strategies have been proposed in the literature for improved and more efficient operation of wastewater treatment plants. Unfortunately, their evaluation and comparison – either practical or based on simulation – is difficult. This is partly due to the variability of the influent, to the complexity of the biological and biochemical phenomena and to the large range of time constants (from a few minutes to several days). The lack of standard evaluation criteria is also a tremendous disadvantage. To really enhance the acceptance of innovative control strategies, such an evaluation needs to be based on a rigorous methodology including a simulation model, plant layout, controllers, sensors, performance criteria and test procedures, i.e. a complete benchmarking protocol. This book is a Scientific and Technical Report produced by the IWA Task Group on Benchmarking of Control Strategies for Wastewater Treatment Plants. The goal of the Task Group includes developing models and simulation tools that encompass the most typical unit processes within a wastewater treatment system (primary treatment, activated sludge, sludge treatment, etc.), as well as tools that will enable the evaluation of long-term control strategies and monitoring tasks (i.e. automatic detection of sensor and process faults). Work on these extensions has been carried out by the Task Group during the past five years, and the main results are summarized in Benchmarking of Control Strategies for Wastewater Treatment Plants. Besides a description of the final version of the already well-known Benchmark Simulation Model no. 1 (BSM1), the book includes the Benchmark Simulation Model no. 1 Long-Term (BSM1_LT) – with focus on benchmarking of process monitoring tasks – and the plant-wide Benchmark Simulation Model no. 2 (BSM2). Authors: Krist V. Gernaey, Technical University of Denmark, Lyngby, Denmark, Ulf Jeppsson, Lund University, Sweden, Peter A. Vanrolleghem, Université Laval, Quebec, Canada and John B.
