Ada 95 Reference Manual. Language and Standard Libraries Aug 03 2020 This Ada 95 Reference Manual is essentially identical to the new International Standard ISO/IEC 8652:1995(E) for the Ada programming language. The thorough technical revisions and extensions documented in this manual are built on broad participation from the international Ada community and generous support by leading institutions. Over 750 submitted revision requests were evaluated, and the resulting enhancements make Ada 95 an outstanding language. The flexibility of languages such as C++, modern features such as object orientation, and improved interfacing capabilities have been added to the reliable software engineering capabilities provided and proven for over a decade by the predecessor version Ada 83; furthermore, upward compatibility from Ada 83 to Ada 95 has been achieved.

Library Licensing Aug 15 2021 This clear and concise manual will help librarians understand licenses so that they can become better reviewers, drafters, and negotiators. Libraries purchase or subscribe to countless resources that are governed by licenses--both digital products and physical objects like rare books or equipment. Many librarians, however, lack the legal expertise to comprehend and assess the clauses found in licenses. Authors Corey Halaychik and Blake Reagan have reviewed and edited thousands of contracts and use the lessons they've learned to help librarians sort through the often archaic and confusing language found in licenses. Library Licensing is a key reference for anyone responsible for reviewing, editing, negotiating, and agreeing to licenses that govern library resources. It contains essential information that will allow the reader to not only understand the language used in contracts but also to replace confusing and redundant language with clear and concise alternatives. Organized with ease of use in mind, chapters are written for quick and easy consultation and application. In-depth coverage of terms used in library contracts Clear and concise definitions of common contract language Guidance on how to make contract language less confusing Step-by-step tips for reviewing, editing, and negotiating contract language

Developing Library Leaders Dec 27 2019 How can you successfully lead your library through the changes taking place in today's transitional information environment? What skills must you develop or hone in order to build a

confident, comfortable, and capable staff in your institution? In their highly practical new How-To-Do-It Manual, authors Robert D. Stuart, the former Dean Emeritus of Simmons College's Graduate School of Library and Information Science and Maureen Sullivan, a leadership expert with over thirty years experience delivering consulting and training services to libraries and other information services, will help you identify the essential concepts and goals behind great leadership, and effectively implement each one into your library's organizational structure. Developing Library Leaders covers key strategies and processes for coaching, team building, and mentoring library staff. Following a foreword from James G. Neal, (Vice President for Information Services and University Librarian, Columbia University) the authors clearly define the major roles and responsibilities of a library leader and offer valuable techniques for persuading and influencing others, building and leading teams and groups, and managing projects. There is step-by-step guidance for developing crucial coaching and mentoring skills, as well as tips for succession planning and facilitating long-term development. Throughout the book, Stueart and Sullivan provide ample models, outlines, examples, and charts for further guidance and to reinforce the practical use of key strategies. The generations-old adage that "leaders are born not bred" is a myth; it is now commonly accepted that leadership is a skill that can be developed. Stueart and Sullivan show current and future library directors and managers how to develop their institutions' most valuable asset - their staff- and better prepare them to lead.

Migrating Library Data Mar 10 2021 "Most librarians and staff participate in at least one data migration during their careers. And since the new systems inevitably work differently than the old ones and require different data to function, it's always a challenge to plan smooth migrations that position libraries to immediately leverage new system capabilities. Using step-by-step instructions and checklists, this book offers expert advice to help library staff without programming knowledge address common conceptual and technical issues encountered in migrations. An important planning and implementation tool that will help prevent headaches and frustration, this book offers: a holistic view of migrating different types of library data in ILSes, institutional repositories, DAMs, and other types of systems used to manage data and operations; shows how to analyze, clean, and manipulate data using skills and tools available to most libraries; demonstrates how to work with specific data types typically encountered such as MARC, XML, and delimited text; examines issues that affect specific areas such as acquisitions, circulation, licensing, and institutional repositories; addresses how to handle changes in authentication management or when moving into a wholly new environment such as a shared catalog; thoroughly covers testing, the final migration process, and putting the new system into full production; offers guidance on planning for system freeze, staff training, and how to deal with fallout; provides step-by-step instructions as well as useful checklists for 'go live' readiness, post-migration functionality."--Résumé de l'éditeur.

Physical forms of catalogue are also considered, along with the filing and arrangement of catalogue entries; centralized and cooperative cataloguing; the organization of cataloguing; and the relation of cataloguing to modern methods of information retrieval. This manual is comprised of 16 chapters and begins with an overview of the nature and purpose of catalogues, as well as the history of cataloguing and catalogues. The discussion then turns to the development and application of the major cataloguing codes, including the British Museum Cataloguing Rules; the Vatican Code; the American Library Association Rules 1949; and the Anglo-American Cataloguing Rules 1967. Some particular problems of author-title cataloguing are considered, together with the solutions suggested by some of the major codes and the practices of some individual libraries. Libraries: A Design Manual Apr 23 2022 Libraries as a building type have been subjected to substantial changes in particular in the past ten years. Milestones such as Rem Koolhaas' Seattle Central Library from 2004 reinvented the typology completely and reflected a development from elitist temple of learning to a public living room. Hybrids between library and department store or theater were conceived. Today, the ubiquity of electronic devices and media needs to be taken into account by the designer: every new library has areas without any books now. This work of reference explains systematically all technological and planning requirements of library design. Special features such as RFID, signage, acoustics or specific structural load issues are explained in texts by experts from the fields of architecture and library science. Finally, approximately 40 best-practice case studies of contemporary library design are documented extensively. They are organized in four categories – national libraries, large public libraries, small public libraries, university libraries – and comprise high-profile examples such as Jo Coenen's Openbare Bibliotheek Amsterdam, Alvaro Siza's Public Library Viana do Castelo in Portugal or Mecanoo's Library of Birmingham from 2013.

Digital Paper Jul 14 2021 Today's researchers have access to more information than ever before. Yet the new material is both overwhelming in quantity and variable in quality. How can scholars survive these twin problems and produce groundbreaking research using the physical and electronic resources available in the modern university research library? In Digital Paper, Andrew Abbott provides some much-needed answers to that question. Abbott tells what every senior researcher knows: that research is not a mechanical, linear process, but a thoughtful and adventurous journey through a nonlinear world. He breaks library research down into seven basic and simultaneous tasks: design, search, scanning/browsing, reading, analyzing, filing, and writing. He moves the reader through the phases of research, from confusion to organization, from vague idea to polished result. He teaches how to evaluate data and prior research; how to follow a trail to elusive treasures; how to organize a project; when to start over; when to ask for help. He shows how an understanding of scholarly values, a commitment to hard work, and the flexibility to change direction combine to enable the researcher to turn a daunting mass of found material into an effective paper or thesis. More than a mere how-to manual, Abbott's guidebook helps teach good habits for acquiring knowledge, the foundation of knowledge worth knowing. Those looking for ten easy steps to a perfect paper may want to look elsewhere. But serious scholars, who want their work to stand the test of time, will appreciate Abbott's unique, forthright approach and relish every page of Digital Paper.

The Bearded Dragon Manual Jun 13 2021 The Bearded Dragon Manual provides the essential information all devoted bearded dragon owners need to meet the demands of these beautiful, naturally tame reptiles. Since reptiles are cold-blooded creatures, most humans don't instinctively understand their requirements the way they understand the needs of a cat or dog. Herp expert Philippe de Vosjoli and his team of veterinarians and authors seek to make keepers confident in their ability to properly care for their bearded dragons through this most informative book. A key component of caring for bearded dragons, according to the authors, is recognizing that their needs change as they develop. De Vosjoli states in the introduction to the book, "Looking at the life stages of bearded dragons also made [the authors] aware that, like humans, they undergo changes in growth and behavior, which may require the dedicated owner to make adjustments in husbandry (and general care) to meet the needs of each life style." The Bearded Dragon Manual is the first book to present this information that is so critical to the proper maintenance of these very popular reptiles. Colorfully illustrated, The Bearded Dragon Manual provides chapter-length coverage on the following topics: selecting a dragon, making a home for a dragon, heating and lighting, diet and feeding management, and behavior. The feeding chapter, which includes as age-by-age guide to nutrition, was co-written with veterinarian Dr. Susan Donoghue. A chapter on breeding discusses strategies for breeding dragons, requirements, conditioning, incubation, and potential problems encountered. Lizard vet extraordinaire Dr. Roger Klingenberg has written a chapter on recognizing and treating bearded dragon diseases, in which he discusses how to recognize a sick dragon, various internal and external parasites, nutritional disorders as well as kidney disease, prolapses, egg-binding, respiratory infections, and eye problems. The chapter concludes with a four-page chart for troubleshooting health problems. Herb expert Jerry Cole has provided a special chapter on frilled dragons, an agamid similar to the bearded dragon that has attracted many bearded dragon fans. Appendices and index included.

Electronic Library Management System (ELMS) Apr 11 2021 Project Report from the year 2012 in the subject Library Science, Information- / Documentation Science, printed single-sided, grade: -, Kampala International University - Dar-es-salaam College (computer studies), course: none, language: English, comment: I undertook this project together with my student and friend mwadawa sadallar. She was very supportive especially in the design of the system. Finally she graduated with a degree of IT. i have a degree in computer science, masters of MIS, and am currently pursuing a PhD of information systems. Am a lecturer of Artificial intelligence, compiler construction, programing and information systems., abstract: For many years, universities & colleges have used file based / manual system to manage library use. Whereas this was quite efficient for some time, due to the expansion of the library and increase in the number of students, the system wastes a lot of time especially when searching for a particular book or resource. In response to this problem, more librarians have been added (employed), and this has escalated the cost of managing the library. This inefficiency, led to the study that was aimed at automating the book keeping function of the library. A study was carried out at Kampala International University Dar salaam Campus and it was discovered that the manual system had inefficiencies ranging from time wastage, high cost of operation in terms of human resources, long search time, data redundancy among others. A computer based library management system was developed using visual studio. The new system allows the user to add books into the system, search for books from the system database, track member information, manage borrowing among others. By automating library operations, the university will enjoy the advantages of using databases and transaction processing systems.
