I.D. Aug 09 2020 ***Winner of the National Crime Short Story Prize*** Robert Barnard's contribution 'Sins of Scarlet' won the National Crime Short Story Prize. A woman contemplating suicide on Beachy Head finds a bench dedicated to the memory of herself. An art lover in Venice conducts a spree of mutilations as a response to the Surrealist Movement. At Heathrow Airport, armed police take up positions to apprehend the wrong man... The latest showcase of shorts from the CWA celebrates the 'who' in the whodunnit, the psyche behind the psychological profile. Husbands lead double lives, psychologists confuse perpetrators with ex-partners, neighbours reassess the people they thought they knew. It seems if there's one thing you can't classify or slap an ID card on, it's the id. The collection includes stories by two recipients of the Crime Writers' Association 'Diamond Dagger' lifetime achievement award (Peter Lovesey and Robert Barnard), and an American Grand Master awardee (Edward D Hoch, who has published more crime short stories than anyone else, ever!).

Computational Physics Aug 28 2019 Help students master real-world problems as they develop new insight into the physical sciences Problems in the physical sciences that once baffled and frustrated scientists can now be solved easily with the aid of a computer. Computers can quickly complete complex calculations, provide numerical simulations of natural systems, and explore the unknown. Computational Physics shows students how to use computers to solve scientific problems and understand systems at a level previously possible only in a research environment. Adaptable to a ten-week class or a full-year course, it provides C and Fortran programs that can be modified and rewritten as needed to implement a wide range of computational projects. Light on theory, heavy on applications, this practical, easy-to-understand guide * Presents material from a problem-oriented perspective * Integrates physics, computer science, and numerical methods and statistics * Encourages creative thinking and an object-oriented view of problem solving * Provides C and Fortran programs for implementing most of the projects * Provides samples of problems actually solved in two ten-week quarters * Includes a 3.5" floppy disk containing the codes featured in the text * Offers multimedia demonstrations and updates on a complementary Web site With this engaging book as a guide, advanced undergraduates and first-year graduate students will gain confidence in their abilities and develop new insight into the physical sciences as they use their computers to address challenging and stimulating problems.

Microfluidics for Medical Applications Jan 26 2022 Lab-on-a-chip devices for point of care diagnostics have been present in clinics for several years now. Alongside their continual development, research is underway to bring the organs and tissue on-a-chip to the patient, amongst other medical applications of microfluidics. This book provides the reader with a comprehensive review of the latest developments in the application of microfluidics to medicine and is divided into three main sections. The first part of the book discusses the state-of-the-art in organs and tissue on a chip; the second provides a thorough background to microfluidics for medicine, and the third (and largest) section provides numerous examples of point-of-care diagnostics. Written with students and practitioners in mind, and with contributions from the leaders in the field across the globe, this book provides a complete digest of the state-of-the-art in microfluidics medical devices and will provide a handy resource for any laboratory or clinic involved in the development or application of such devices.

Parallel Curriculum Units for Science, Grades 6-12 Mar 28 2022 Based on the best-selling book *The Parallel Curriculum*, this resource deepens teachers' understanding of how to use the Parallel Curriculum Model (PCM) to provide rigorous learning opportunities for students in science, grades 6-12. This collection of sample units and lessons within each unit were developed by experienced teachers and demonstrate what high-quality curriculum looks like within a PCM framework. Ideal for use with high-ability students, the units revolve around genetics, the convergence of science and society, the integration of English and Biology, and the Periodic Table. Lessons include pre- and post-assessments.

Hauntings and Poltergeists Mar 16 2021 Few people can claim the distinction of experiencing first-hand such occurrences as hauntings and the presence of poltergeists, but countless numbers of people are fascinated by these unexplainable events. Written by the world's most knowledgeable authorities in this field, the essays in this work promote a better understanding of the manifestations of and various reasons for hauntings and poltergeist phenomena. The experts come from such backgrounds as anthropology, history, philosophy, psychiatry, and sociology, and provide sober yet highly readable in-depth discussions of numerous ideas and rationalizations for hauntings and poltergeists, from a critical and scientific perspective. Divided into three major sections—sociocultural, physical and physiological, and psychological perspectives—this work provides an overview of each perspective and also addresses the general psychology of belief in the paranormal and how that belief relates to experiences with ghosts and poltergeists.
