Problems Of Higher Education In India: An Approach To Structural Analysis And Reorganization Jan 02 2020 Problems facing higher education in India are examined in terms of systems analysis, structural changes, input-output ratios, and critical perspectives of the system itself. Part I (Introduction and Present Position) provides an introduction to the problems, information on the education commission, and planning in education. Part II (Higher Education and Systems) examines the economics of education, systems analysis, and structural changes and articulation. Part III (Structural Changes and Reorganization) discusses: structural changes and reorganization; the need for community/junior colleges in India; the open university; central responsibility; and the coordination of higher education in a federal system. Several suggestions are offered such as: (1) the need for clear definition of goals and purposes; (2) emphasis on the preservation of inherent quality and diversity; (3) spread of community/junior colleges across the nation; (4) the establishment of open universities; (5) advancement of social justice; (6) that associate in arts degrees be made generally available after the two years of post-10-year school education, to be followed by two- or three-year-degree courses in different faculties (a mix of the U.S.S.R. and U.S. systems); and (7) that all postsecondary education be properly coordinated and systematized. A listing of the universities in India are appended, and a bibliography and index are provided. (LC)

Static Timing Analysis for Nanometer Designs Jan 14 2021 iming, timing, timing! That is the main concern of a digital designer charged with designing a semiconductor chip. What is it, how is it T described, and how does one verify it? The design team of a large digital design may spend months architecting and iterating the design to achieve the required timing target. Besides functional verification, the t- ing closure is the major milestone which dictates when a chip can be - leased to the semiconductor foundry for fabrication. This book addresses the timing verification using static timing analysis for nanometer designs. The book has originated from many years of our working in the area of

timing verification for complex nanometer designs. We have come across many design engineers trying to learn the background and various aspects of static timing analysis. Unfortunately, there is no book currently ava- able that can be used by a working engineer to get acquainted with the - tails of static timing analysis. The chip designers lack a central reference for information on timing, that covers the basics to the advanced timing veri-cation procedures and techniques.

A Taxonomy for Texture Description and Identification Sep 02 2022 A central issue in computer vision is the problem of signal to symbol transformation. In the case of texture, which is an important visual cue, this problem has hitherto received very little attention. This book presents a solution to the signal to symbol transformation problem for texture. The symbolic de- scription scheme consists of a novel taxonomy for textures, and is based on appropriate mathematical models for different kinds of texture. The taxonomy classifies textures into the broad classes of disordered, strongly ordered, weakly ordered and compositional. Disordered textures are described by statistical mea- sures, strongly ordered textures by the placement of primitives, and weakly ordered textures by an orientation field. Compositional textures are created from these three classes of texture by

using certain rules of composition. The unifying theme of this book is to provide standardized symbolic descriptions that serve as a descriptive vocabulary for textures. The algorithms developed in the book have been applied to a wide variety of textured images arising in semiconductor wafer inspection, flow visualization and lumber processing. The taxonomy for texture can serve as a scheme for the identification and description of surface flaws and defects occurring in a wide range of practical applications.

Acoustical Analysis of the Tanpura Mar 16 2021 This book addresses the acoustic signal analysis and spectral dynamics of the tanpura, an Indian plucked string instrument. In addition, it strives to provide a logical and objective explanation of Indian classical musicians' cognitive experience. Issues of relevance in this regard include the rich, mellifluous sound; the undulation of the loudness; the somewhat cyclical variation of the timbre, which is strongly related to these undulations; and the occasional perception of virtual notes to which no strings are tuned. The book analyses the materials used in the tanpura, the instrument's simple structure, the intricacies of the lower bridge, and the theory of string vibration with variable string length. Cognitive experiments to provide the basis for perceptual quality assessment, as well as a methodology for ranking, are described. This is followed by acoustic analyses, both temporal and spectral, for sounds produced by male and female tanpuras, for each individual string and the combined one. An important aspect related to the naturalness of perceived sound, namely the intrinsically associated random perturbations, is also discussed. The apparent irregularities perceived in the acoustic signal produced by the tanpura reveal the importance of examining the signal from the perspective of non-linear analysis, an aspect that is also covered in the book. Given its scope, the book will appeal to students and researchers in the fields of music acoustics, artificial intelligence, and cognitive science, as well as musicians and musicologists around the world.

New Religious Movements in Modern Asian History Apr 16 2021 This book provides evidence that the emergence of Asian new religious movements (NRMs) was predominantly the result of anti-colonial ideology from local religious groups or individuals. The contributors argue that when traditional religions were powerless to maintain their cultural heritage, the leadership of NRMs adduced alternative principles, and the new teachings of each NRM attracted the local people enough for them to change their beliefs. The contributors argue that, as a whole, the Asian new religious movements overall were very ardent and progressive in transmitting their new ideologies. The varied viewpoints in this volume attest to the consistent development of Asian NRMs from domestic and international dimensions by replacing old, traditional religions.

Deepening Groove Jul 20 2021 "The poems in Deepening Groove proceed in elegant triplets that drift effortlessly down the page on waves of sound, serenely self-confident. The subjects are animals, trees, flowers, fish, the weather, and the human condition, all mixed up in a heady stew that simmers quietly one minute, and shimmers brightly the next. This is a book of savvy, delicious surprises." -Wyn Cooper "In Deepening Groove, Ravi Shankar's poems are small wonders of defining, seeing, and sound. He is a poet fascinated with

transformations and here are shiftings of dust and sand, loon calls, flutterings of insects, changing tides and splendid cascades- always information-driven, often rapturous with Hopkins-like intensities, imperatives, and trochaic stresses. What I'm most taken by is how the poems both see and feel simultaneously: In "Dark," "Darkness in New England has a flavor close / to anise, a texture plush as peat moss." In "Bats," the bats' flight is "carrying away pieces of us, / a maelstrom too faint to see, turning to ellipsis...." In virtually all these poems, to quote words from "Willard Pond," there is "a sense // that the distance between the alternate / universes humans" [and other creatures on Earth] "inhabit is smaller / than ever imagined and more astonishing." And although the poems give special pleasures on first encounters, they contain-as in "The Oyster"-"secrets that require / a knife to pry open and vinegar to serve." Deepening Groove shows Ravi Shankar is truly, now, one of America's finest younger poets." -Dick Allen Ravi Shankar is Executive Director of Drunken Boat and Co-Director of the Creative Writing Program at Central Connecticut State University. His first full length book was Instrumentality (Word Press, 2004). Along with Tina Chang and Nathalie Handal, he edited Language for a New Century: Contemporary Poetry from Asia, the Middle East & Beyond (W.W. Norton & Co.). He has appeared in the New York Times and the Chronicle of Higher Education, and on the BBC and NPR. He teaches in Fairfield University's MFA Program and in the first international MFA Program at City University of Hong Kong.

Psycho-Social Analysis of the Indian Mindset Mar 04 2020 This volume situates Indians in the contemporary world and profiles the major facets of their thought and behaviour; then goes back to trace their roots to ancient thought to see how the past predisposes and the present guides Indians in their everyday life. The volume begins with a conceptual framework showing how the Indian worldview has encompassed and enveloped a variety of ideas and influences from divergent sources. As a result, Indians are both collectivists and individualists, hierarchically oriented while respecting merit and quality, religious as well as secular and sexually indulgent, spiritual as well as materialists, excessively dependent but remarkably entrepreneurial, non-violent in principle but violent in practice and comfortable in shifting between analytical, synthetic as well as intuitive approaches to reality. Such a coexistence of opposites often causes inaction, hesitation and perfunctory action, but also equips Indians to be innovative by continuously aligning their thought and behaviour to the demands of a milieu. The milieu has an inner layer consisting of desh (place), kaal (time) and paatra (person), which are embedded in the larger societal contexts of castes and classes, poverty, corruption, fragmenting politics, conflicts and violence and unfolding global opportunities and challenges. Cultural heritage permeates in all these. Indians function in this tiered, multifactorial, dynamic space. This volume draws evidence from ancient texts and the latest national and international research, many of which were conducted by the author and his associates. It does not, however, hesitate to indulge in anecdotal evidence, cases and speculative ideas in order to complete the picture. The author takes an in-depth view of the Indian mindset without getting the reader lost in either the intricacies of ancient philosophical abyss or the trivialities of present-day non-events.
