Change, Transformation and Development Oct 29 2022 For as long as one can remember, the edifice of the neoclassical economic syn thesis has been under attack. Critiques have focused on the extreme unreality of the assumptions that underpin the Arrow-Debreu theorems of welfare economics. They have queried the excessive formalism of the edifice, and the lack of practical significance of many of the results.They have castigated the neoclassical synthesis for its internal incoherence (lacking an independent theory of capital, for example, one of the favorite topics of the Cambridge school), its lack of a dynamic element, its non-evolutionary character, its lack of any conception of "market process" and so the list could be continued (Blaug, 1997). Through all this, the neoclassical synthesis remains as strong as ever, impervious it seems to these or any other attacks. In this paper a different tack is taken. The neoclassical edifice is left alone, standing as a representation of what goes on in a certain kind of economy- namely the economy where goods and services are produced and exchanged. The paper then introduces another kind of economy, namely an economy of productive entities called "resources"- that are needed to produce the economy of goods and services.

A Molecular and Cellular View of Protein Kinase CK2 Jul 22 2019 It is now generally recognized that protein kinase signaling is involved in virtually every aspect of cell function, including growth and proliferation. The field of protein phosphorylation, including the enzymes involved in this post-translational modification, continues to advance at a fascinating pace. Since the first international meeting on this topic, held in Heidelberg in 1994, several new avenues of CK2 research have emerged despite persistent deficiencies in our understanding of the regulation of its activity. Among the significant new directions are studies related to the structure of the enzyme, especially its crystal structure, as well as an interesting aspect of CK2 function that involves its subunits as binding partners of several other proteins. In addition, new data have been gathered on the role of CK2 in transcription as well as in certain other cellular functions. To address these various aspects of the progress of CK2, a number of key scientists from different parts of the world came together at the second international meeting on 'A Molecular and Cellular View of Protein Kinase CK2', held at Villard de Lans near Grenoble on September 24-26, 1997. The meeting was attended by nearly 50 participants and included 28 presentations, which provide a view of the latest progress on protein kinase CK2.

Electron Microscopy of Model Systems Apr 30 2020 The volume covers the preparation and analysis of model systems for biological electron microscopy. The volume has chapters about prokaryotic as well as eukaryotic systems that are used as so-called model organisms in modern cell biology. These systems include the most popular systems, such as budding and fission yeast, the roundworm *C. elegans*, the fly *Drosophila*, zebrafish, mouse, and *Arabidopsis*, but also organisms that are less frequently used in cell biology, such as *Chlamydomonas*, *Dictyostelium*, *Trypanosoma*, flatworms, *Axolotl* and others. In addition, tissues and tissue culture systems are also covered. These systems are used for very diverse areas of cell biology, such as cell division, abscission, intracellular transport, cytoskeletal organization, tissue regeneration and others. Moreover, this issue presents the currently most important methods for the preparation of biological specimens. This volume, however, is not a classic EM methods book. The methods are not the main focus of this issue. The main goal here is to cover the methods in the context of the specific requirements of specimen preparation for each model organism or systems. This will be the first compendium covering the various aspects of sample preparation of very diverse biological systems. Covers the preparation and analysis of model systems for biological electron microscopy Includes the most popular systems but also organisms that are less frequently used in cell biology Presents the currently most important methods for the preparation of biological specimens First compendium covering the various aspects of sample preparation of very diverse biological systems

Advanced Public Procurement as Industrial Policy Mar 10 2021 This study is about the macroeconomic effects of positive externalities or industrial spillovers around advanced production. The case explored is the "technology di- dend" around Swedish aircraft industry, and in particular around the aircraft manufacturer Saab, and the major industrial project of the JAS 39 Gripen multirole combat aircraft. The project is partly an updating of my book (in Swedish) Technology 1 Generator or a National Prestige Project from 1995, but extends the analysis in several directions. The study includes a chapter on spillovers from advanced production in an industrially developing economy. South Africa, that has acquired the JAS 39 Gripen for its Air Force. There is also a chapter in which the results for Sweden are discussed in the wider context of advanced public procurement in Europe. The text has been organized such that the main chapters have been written for academic readers. Two supplements include the technical details of data collection, mathematical models, and calculation methods. The first chapter is brief and focused on the results. It has the character of an extended executive summary. The second chapter summarizes the entire story; problems, results, and methods. This project would not have been possible without the generous support of a number of people. First of all great thanks go to all those people with crowded calendars in Swedish industrial firms that have set aside time to respond to my questions. Most of them have been listed at the end of the book.

The Business of Projects Oct 17 2021 The Business of Projects broke ground when it was first published in 2005, by showing how leading businesses create and implement projects to drive strategy and innovation. Projects are used to coordinate activities with customers and suppliers and ensure that organisations become more dynamic and adaptable. The book extends the resource-based view of the firm to focus on the business lessons learned from the design and production of high-value complex products and systems (CoPS), which have always been project-based. As well as frameworks and management tools, it provides case studies of high-technology industries - such as telecommunications, flight simulation and medical devices - to show how projects are used to achieve strategic objectives, perform systems integration, organise productive activities, manage software, achieve organisational learning and deliver solutions for customers. This book is essential reading for project professionals, academics, students, engineers, managers and policy makers seeking a strategic, innovative perspective on projects.

Disaster Communications in a Changing Media World Dec 19 2021 Communications is key to the success of disaster mitigation, preparedness, response and recovery. Accurate information disseminated to the general public, to elected officials and community leaders, and to the media reduces risk, saves lives and property, and speeds recovery. The ability to communicate is no longer an afterthought or a luxury; timely communication is now as important as logistics or the pre-deployment of materials. Planning and controlling the flow of information before, during and after a disaster will define your organization's credibility, trustworthiness, authority, and effectiveness. The emergence of new media like the internet, e-mail, blogs, text messaging, cell phone photos, and the increasing role played by "first informers"-- witnesses who now have the ability to transmit information immediately from the event--are redefining the roles of government and media. The government's historical role as gatekeeper is now an anachronism. Traditional media's role as the sole conduit of reliable and officially-sanctioned information has been eclipsed by the advent of new media. The tools and rules of communications are evolving and disaster communications must evolve to capitalize on these changes and exploit the opportunities they provide. Bloggers have the potential either to add to the chaos during a crisis, or to help convey accurate data and report on local conditions. Disaster communications must incorporate a way to manage their impact and if possible use them for the common good. Finally, even though the means to the end are evolving, the goals, the values, and the underlying principles of effective disaster communication-- the need for transparency, increased accessibility, trustworthiness and reliability, and to create partnerships with the media--have not changed and need to be embraced along with the practical ability to convey information effectively. * Applies the principles of emergency management to communications during a disaster * Covers terrorist incidents, accidents, and natural disasters like hurricanes and earthquakes * Shows how to use blogs, text messages, and cell phone cameras as well as government channels and traditional media to communicate during a crisis

Vergleich der Übersetzungssysteme SDLX und Translator's Workbench Jul 14 2021 Inhaltsangabe:Einleitung: Die Arbeit beschäftigt sich mit dem Vergleich zweier Übersetzungssysteme, gemeinhin auch als Translation Memory-Systeme, CAT-Tools oder Übersetzerarbeitsumgebungen bezeichnet. In diesen Programmen werden die Sätze und ihre Übersetzungen paarweise in einer Datenbank abgespeichert, auf Basis von Zeichenkettenvergleichen dort wiedererkannt und dem Übersetzer als mögliche Übersetzungsvorschläge vorgeschlagen, sobald das System auf einen Satz im zu übersetzenden Text stößt, der einem bereits gespeicherten Satz ähnelt oder mit ihm vollständig übereinstimmt. Im Gegensatz zu den vollautomatischen, maschinellen Übersetzungssystemen (MÜ) werden Übersetzungssysteme heute als die wichtigsten EDV-gestützten Hilfswerkzeuge im Übersetzungsprozess angesehen und sind aus der Praxis, insbesondere in der technischen Fachübersetzung, nicht mehr wegzudenken. Es wird das bekannteste Übersetzungssystem, der Marktführer Translator's Workbench von der Firma TRADOS, mit dem in Deutschland noch wenig verbreiteten SDLX von SDL International verglichen. Das Ziel der Arbeit soll es sein, eine Beurteilung darüber zu fällen, welches der beiden Systeme auf längere Sicht den größten Produktivitätsgewinn für einen freischaffenden Übersetzer oder ein projektorientiert arbeitendes Übersetzungsbüro bietet. Dabei werden die Arbeitsweisen und -abläufe dieser Systeme sowohl aus dem Blickwinkel des Übersetzers am Einzelarbeitsplatz als auch aus der Sicht eines Übersetzungsbüros im Netzwerkeinsatz untersucht und kommentiert. Die dabei zur Verfügung stehenden Funktionen und ihr praktischer Nutzwert sowie der allgemeine Komforteindruck (logische Benutzerführung, Flexibilität des Funktionszugriffs, transparentes Programmverhalten, Menge der Anwendereingriffe) werden dabei detailliert besprochen. Es werden ebenfalls die Bestandteile und Leistungsmerkmale der beiden Systeme in der Untersuchung berücksichtigt, die dem Terminologiemanagement und dem Datenaustausch auf der Datenbankebene dienen (Translation Memories und Terminologiedatenbanken). Dabei kommt ein Bewertungssystem zum Einsatz, mit dem die Untersuchungsergebnisse zu einem Notenschema zusammengefasst werden sollen. Auf Basis dieser Zensuren wird eine Kaufempfehlung ausgesprochen. Neben den freischaffenden Übersetzern und Übersetzungsbüros mit In-House-Ressourcen zählen auch Entwickler solcher Systeme zu der Leserzielgruppe dieser Arbeit, da zahlreiche Verbesserungsüberlegungen [...]

FDI in China Feb 09 2021 By the early 21st century, the FDI (Foreign Direct Investment) sector had carved out a major niche in the Chinese economy and exerted a remarkable impact on the nation's economic growth, industrial restructuring and its degree of integration with the global economy. The major role of the FDI sector manifests itself in many aspects, such as serving as a source of funds, improving investment efficiency, boosting output, introducing advanced technology and research capacities, ameliorating the industrial structure, expanding exports, upgrading the export commodity mix, and promoting economic restructuring. All these are described and analysed in great detail in this book. The last few chapters of the book feature the author's prognostications of the key areas where FDI is to be solicited and the salient features of what China will do in this respect. FDI will continue its massive flow into the Chinese manufacturing industry and play an active role in turning China into a global manufacturing centre for a number of industries. The FDI inflow in the service industry will surge in a sustained fashion, thereby raising its efficiency and improving the services offered. In the last section of the book the author presents her idea about the emphasis and trends of the Chinese government when adapting its policies governing foreign investment to an increasingly open economy, and ponders what administrative policies and measures will be taken in this regard.

Reversible Protein Phosphorylation in Cell Regulation Jun 20 2019 This book, published in association with the journal MOLECULAR AND CELLULAR BIOCHEMISTRY, is dedicated to Ed Krebs and Eddy Fischer in celebration of their 1992 Nobel Prize in Physiology and Medicine. Reversible protein phosphorylation is a research field pioneered and developed by Krebs and Fischer. This book contains short reviews and original research papers contributed by Krebs and Fischer's coworkers, both former and current. The contents reflect the two-way interaction between protein phosphorylation and other biomedical research fields. The chapters are grouped into four sections. The first two deal with structure/function aspects of protein kinases and protein mechanisms. Unlike many other research fields, which undergo periods of intense activity and productivity followed by relative calm, the protein phosphorylation field enjoyed continued growth both in scope and intensity, and the pace of this growth has increased markedly in recent years. This volume will provide a glimpse of the dynamism and diversity of the research activity representative of the current state of the field.
