Palaeopathology May 06 2020

Palaeopathology is designed to help bone specialists with diagnosis of diseases in skeletal assemblages. It suggests an innovative method of arriving at a diagnosis in the skeleton by applying what are referred to as 'operational definitions'. The aim is to ensure that all those who study bones will use the same criteria for diagnosing disease, which will enable valid comparisons to be made between studies. This book is based on modern clinical knowledge and provides background information so that those who read it will understand the natural history of bone diseases, and this will enable them to draw reliable conclusions from their observations. Details of bone metabolism and the fundamentals of basic pathology are also provided, as well as a comprehensive and up-to-date bibliography. A short chapter on epidemiology provides information on how best to analyze and present the results of a study of human remains.

SEER Summary Staging Manual 2000 Oct 11

2020 From the *Surveill., Epidem., & End Results (SEER) Prog.* based at the Nat. Cancer Inst. Intended as a coding manual beginning with cases diagnosed from Jan. 1, 2001 rather than a staging guide. Each anatomic site in the Topography Sect. of the Internat. Class. of Disease for Oncology -- 3rd Ed. (ICD-0-3) has a corresponding summary staging scheme. Certain specific histologic types also have specific staging schemes. In some cases, sites which previously had separate guides (such as the segments of the colon) have a single staging scheme (colon), whereas some sites which previously had a single guide (e.g., larynx) have separate schemes for each sub-site of the larynx.

Handbook of Research on Women in

Management and the Global Labor Market

Mar 04 2020 Existent literature has identified the existence of some differences between men and women entrepreneurs in terms of propensity to innovation, approach to creativity, decision making, resilience, and co-creation. Without properly examining the current inequalities in social-economic structures, it is difficult to examine the results of corporate female leadership. The Handbook of Research on Women in Management and the Global Labor Market is a pivotal reference source that examines the point of convergence among entrepreneurship organizations, relationship, creativity, and culture from a gender perspective, and researches the relation between current inequalities in social-economic structures and organizations in the labor market, education and individual skills, wages, work performance, promotion, and mobility. While highlighting topics such as gender gap, woman empowerment, and gender inequality, this publication is ideally designed for managers, government officials, policymakers, academicians, practitioners, and students.

The Social Aspects of Environmental and Climate Change Jun 18 2021

The Social Aspects of Environmental and Climate Change critically examines the prominence of natural science framing in mainstream climate change research and demonstrates why climate change really is a social issue. The book highlights how assumptions regarding social and cultural systems that are common in sustainability science have impeded progress in understanding environmental and climate change. The author explains how social sciences theory and perspectives provide an understanding of institutional dynamics including issues of scale, possibilities for learning, and stakeholder interaction, using specific case studies to illustrate this impact. The book highlights the foundational role research into social, political, cultural, behavioural, and economic processes must play if we are to design successful strategies, instruments, and management actions to act on climate change. With pedagogical features such as suggestions for further reading, text boxes,

and study questions in each chapter, this book will be an essential resource for students and scholars in sustainability, environmental studies, climate change, and related fields.

Eta Carinae and the Supernova Impostors Nov 11 2020

In 1965 Fritz Zwicky proposed a class of supernovae that he called "Type V", described as "excessively faint at maximum". There were only two members, SN1961v and Eta Carinae. We now know that Eta Carinae was not a true supernova, but if it were observed today in a distant galaxy we would call it a "supernova impostor". 170 years ago it experienced a "great eruption" lasting 20 years, expelling 10 solar masses or more, and survived. Eta Carinae is now acknowledged as the most massive, most luminous star in our region of the Galaxy, and it may be our only example of a very massive star in a pre-supernova state. In this book the editors and contributing authors review its remarkable history, physical state of the star and its ejecta, and its continuing instability. Chapters also include its relation to other massive, unstable stars, the massive star progenitors of supernovae, and the "first" stars in the Universe.

The Light and Smith Manual Feb 12 2021 An immensely useful manual with many attractive features: comprehensive and lucid keys, precise diagrams, annotated checklists and up-to-date references. ... there is no doubt that it should be seen as an example of the type of manual which is so badly needed in the study of the fauna of many shores around the world.--
Journal of Animal Ecology Congratulations to the editors, contributors, and publisher for a job well done. The third edition has been rewritten, corrected, and enlarged, so that while retaining the basic organization of the earlier ones, it is more useful, informative and up-to-date. The meticulous scholarship of Smith and Carlton is just what the revision needed.--
Systematic Zoology This revision should serve for many years. It is therefore particularly commendable that the editing has been meticulous, perhaps flawless. ... thanks are due to the many contributors for a job well done.--
The Quarterly Review of Biology As the Pacific Coast intertidal zone undergoes increasingly profound changes, knowing the sentinel invertebrates can foretell the future of the sea, and hence, of our species. Jim Carlton's hefty new update of *The Light & Smith Manual*, the comprehensive compendium of who's who between the tides, is the best and quickest way to do so.--
Elliot A. Norse, President, Marine Conservation Biology Institute This much-anticipated modernization of *Light's Manual* is an astonishing accomplishment, blending state-of-the-art taxonomy with profusely illustrated and user-friendly keys to who's whom on marine shores from its stated boundaries of mid-California through Oregon, and clearly, much further north. It's also an informative, well referenced read. Marine biologists should not leave home without it.--
Robert Paine, Professor Emeritus of Biology, University of Washington At this time of environmental

change and loss of biodiversity, species identification has never been more important. The fourth edition of *Light and Smith* is more than just a field guide--it is a masterwork of research and description with a strong focus on morphological detail. No other book has such a broad scope, newly expanded to include even the most obscure taxa. The revised keys and beautiful anatomical illustrations make this classic guide more indispensable than ever. As taxonomists become extinct, there are fewer students to receive the vast body of knowledge accumulated by generations of careful study. I hope that the beauty and depth of this guide will inspire a generation of young scientists to continue this critical taxonomic work. It will have a place of honor in all marine labs.--

International Classification of Diseases for Oncology Mar 16 2021 This edition of ICD-O, the standard tool for coding diagnoses of neoplasms in tumour and cancer registrars and in pathology laboratories, has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-O is a dual classification with coding systems for both topography and morphology. The book has five main sections. The first provides general instructions for using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code.

The SAGES Manual of Pediatric Minimally Invasive Surgery Sep 29 2019 This manual provides a comprehensive, state-of-the-art review of this field, and will serve as a valuable

resource for adult and pediatric surgeons at all stages of experience with interest in the use of minimally invasive surgical techniques in children. This book will review the pediatric surgical disorders that are currently treatable with these techniques. After a basic summary of the disorder, the preoperative evaluation and preparation is presented. Each chapter focuses on a detailed discussion of the surgical procedure, inclusive of anesthesia, positioning, instrumentation, and materials. Emphasis is placed on technique and tips for particularly challenging aspects of the operation. A description of the expected postoperative course and common complications of each procedure follows. The outcomes literature to include any advances since the original outcomes and expected future advances for the diagnosis and procedure is presented. It provides a concise yet comprehensive summary of the current status of the field that will help guide patient management and stimulate investigative efforts. All chapters are written by experts in their fields and include the most up to date scientific and clinical information.

Dismantling the Racism Machine Dec 01 2019

While scholars have been developing valuable research on race and racism for decades, this work does not often reach the beginning college student or the general public, who rarely learn a basic history of race and racism. If we are to dismantle systemic racism and create a more just society, people need a place to begin. This accessible, introductory, and interdisciplinary guide can be one such place. Grounded in critical race theory, this book uses the metaphor of the Racism Machine to highlight that race is a social construct and that racism is a system of oppression based on invented racial categories. It debunks the false ideology that race is biological. As a manual, this book presents clear instructions for understanding the history of race, including whiteness, starting in colonial America, where the elite created a hierarchy of racial categories to maintain their power through a divide-and-conquer strategy. As a toolbox, this book provides a variety of specific action steps that readers can take once they have developed a foundational understanding of the history of white supremacy, a history that includes how the Racism Machine has been recalibrated to perpetuate racism in a supposedly "post-racial" era.

Manual of Neonatal Respiratory Care Sep 09 2020 The latest edition of this popular book covers the "how-to" of respiratory care of newborns. Chapters from the previous edition have been updated to reflect advances in both equipment and practice, while newer chapters reflect the evolving worldwide approaches to neonatal respiratory failure, such as sustained inflation, optimization of lung volume, and the use of volumetric capnography, aerosol therapy, and management of chylothorax. New additions to the book also include chapters on assessment of large data bases, implementation

of quality improvement programs in neonatal respiratory care, chronic ventilation of the baby with non-respiratory failure. The text also features case studies for self-review and is illustrated with high quality radiographic images, figures, tables, and algorithms. Written and edited by international experts, the Manual of Neonatal Respiratory Care, Fourth Edition is a thorough update and remains a convenient source of practical information on respiratory physiology, exam techniques, tips for performing procedures, radiography, ventilation, pain management, transport, and discharge planning.

The Vixen Star Book User Guide Apr 16

2021 This book is for anyone who owns, or is thinking of owning, a Vixen Star Book Ten telescope mount or its predecessor. A revolution in amateur astronomy has occurred in the past decade with the wide availability of high tech, computer-driven, Go-To telescopes. Vixen Optics is leading the way by offering the Star Book Ten system, with its unique star map graphics software. The Star Book Ten is the latest version of computer telescope control using star map graphics as a user interface, first introduced in the original Star Book first offered in 2003. The increasingly complicated nature of this software means that learning to optimize this program is not straightforward, and yet the resulting views when all features are correctly deployed can be phenomenal. After a short history of computerized Go-To telescopes for the consumer amateur astronomer market, Chen offers a treasury of technical information. His advice, tips, and solutions aid the user in getting the most out of the Star Book Ten system in observing sessions.

Crossing the Color Line Oct 23 2021

Interracial sex mattered to the British colonial state in West Africa. In Crossing the Color Line, Carina E. Ray goes beyond this fact to reveal how Ghanaians shaped and defined these powerfully charged relations. The interplay between African and European perspectives and practices, argues Ray, transformed these relationships into key sites for consolidating colonial rule and for contesting its hierarchies of power. With rigorous methodology and innovative analyses, Ray brings Ghana and Britain into a single analytic frame to show how intimate relations between black men and white women in the metropole became deeply entangled with those between black women and white men in the colony in ways that were profoundly consequential. Based on rich archival evidence and original interviews, the book moves across different registers, shifting from the micropolitics of individual disciplinary cases brought against colonial officers who "kept" local women to transatlantic networks of family, empire, and anticolonial resistance. In this way, Ray cuts to the heart of how interracial sex became a source of colonial anxiety and nationalist agitation during the first half of the twentieth century.
